

## Waste Management Policy

MFCB believes in the responsible consumption of resources to avoid compromising the needs of the future generation. To achieve this, we aim to reduce the waste we generate by reducing, recycling and reusing resources where possible as well as by safely and efficiently disposing the waste generated from our businesses.

- i. We comply with the Department of Environment in all the countries we operate in to ensure that our waste and effluents are effectively managed and properly disposed in accordance to local rules and regulations.
- ii. We encourage our business units to reduce, reuse and recycle materials where possible. All recyclable materials produced are sent for appropriate recycling.
- iii. We conduct awareness programs to educate our stakeholders and the public in the communities we operate in to reduce their consumption natural resources where possible.

We expect all of our employees, business partners and suppliers to respect and adhere to our waste management policy. We will constantly review our waste management methods and look for ways to further improve them.
