

Water Management Policy

MFCB understands that water is a finite and irreplaceable natural resource and that access to clean water is a fundamental human right. Therefore, we aim to reduce and conserve our water usage to ensure our stakeholders and the future generations have access to water in the long-term.

- i. We comply with all local rules and regulations on all water-related requirements in the countries we operate in.
- ii. We monitor and ensure the effluents discharged by our business units are safe and meet local standards.
- iii. We regularly monitor the quality of water in the areas surrounding our operations and minimise pollution.
- iv. We conduct awareness programs to educate our stakeholders and the public in the communities we operate in to responsibly consume water.
- v. We ensure the communities we operate in have access to clean and potable water and that this access is never blocked as a direct or indirect result of our operations.

We expect all of our employees, business partners and suppliers to respect and adhere to our water management policy. We will constantly review our water management methods and identify ways to improve efficiency and contribute to water security.
